

ABSTRACT

A combined curtain rod and shade assembly for a windowed device having two opposing corners attached to sheet rock with studs therebehind and a window therebetween, having a pair of conforming and opposing virtually 90 degree angled member portions for meeting the corner between the window and the frame, having a rear portion thereto, in which, on the side of each, is presented a coupling device for acceptance of a rod for a shade assembly, on the 90 degree recess a coupling device for enable at least one curtain rod assembly for hookable assemblage such that the distance traversed between the two member portions is effectively the width of the window; and an adhesive material on the rear portion of each of said angled member portions. The curtain rod and shade assembly further having a multiplicity of screw holes and screws of such length sufficient to enable passage through the sheet rock and into the studs. In a preferred embodiment, the curtain rod and shade assembly satisfies the presence of molding, by having adhesive material further having foamed material such that upon installation the foamed material conforms with the molding for a tight fit assembly.
